

SNACKWISE – UI STYLE GUIDE

Healthy Snack Discovery Website • Designed and developed using Framer

1. Introduction to Framer

Framer is a modern visual website design and development tool used to create responsive, interactive, and visually engaging websites. It provides a visual canvas where designers can build page layouts, define typography and colors, create reusable components, manage spacing and responsive breakpoints, and add interactions and animations. Framer also provides publishing capabilities, allowing a completed design to be presented as a live website.

For this project, Framer was used as the main design and website development tool for creating SnackWise. The interface was designed with a clear visual hierarchy and a consistent component system. Reusable components were used for repeated category cards, snack cards, buttons, and other interface elements. This approach helps maintain consistency throughout the website and makes the design easier to manage and update.

The responsive capabilities of Framer were considered while arranging the sections and card layouts so that the website can provide a suitable experience across different screen sizes. Interactions, hover effects, navigation elements, and visual transitions can also be incorporated to make the website feel more engaging and user-friendly.

2. Project Overview

SnackWise is a healthy snack discovery website designed to help users explore tasty and nutritious snack options. The website organizes snacks according to cravings, goals, preparation time, and preferences. It combines attractive food imagery with concise nutrition information and clear actions to create a simple and enjoyable browsing experience.

3. Design Objective

The main objective of SnackWise is to make healthy snack discovery simple, attractive, and easy to use. The design uses a fresh food-oriented visual style rather than a clinical appearance. Strong typography, food imagery, rounded cards, consistent spacing, and clear calls to action create a friendly interface that encourages users to explore different snack options.

4. Website Structure

- Home – Introduces SnackWise and highlights the main snack discovery features.
- Browse by Craving – Allows users to explore snacks through craving-based categories.
- Snack for Your Day – Organizes options around different everyday goals and needs.
- Popular Right Now – Displays popular snack choices using reusable snack cards.
- Snack Matchmaker – Provides a guided way to find a suitable snack.
- Quick Snacks – Presents snacks based on preparation time.
- Recipe of the Moment – Highlights a selected recipe with supporting information.

5. Visual Design System

Color Palette

The website uses a light, fresh background combined with green as the primary visual accent. Warm supporting colors add energy to the interface and complement the food imagery. Dark text is used for readability and clear visual contrast.

Typography

Typography is organized into a clear hierarchy. Large bold headings establish the main message, section headings divide the page into meaningful areas, body text provides supporting information, and smaller metadata is used for nutrition, preparation time, and category labels.

Cards

Rounded cards are a major visual pattern in SnackWise. Category cards and snack cards follow consistent dimensions, spacing, image treatment, typography, and interaction behavior while displaying different content.

Spacing and Layout

Generous whitespace separates major sections and prevents the interface from appearing crowded. Card grids and content groups are aligned consistently to create a clean visual rhythm.

Imagery

Food photography is used prominently to make the website visually appealing and help users identify snacks quickly. Images are combined with concise text rather than replacing important information.

6. Detailed Descriptions

Hero Section

The Hero Section is the first visual area of the SnackWise website and establishes the brand identity and purpose of the platform. The main heading communicates the idea of healthy snacks in a simple and memorable way. Supporting text explains the purpose of the website, while the primary and secondary CTA buttons guide users toward exploring snacks or finding a suitable snack. The large food imagery provides an immediate visual connection with the website's theme. The section demonstrates visual hierarchy through heading size, supporting text, button placement, whitespace, and imagery.

Browse by Craving and Snack for Your Day

This screenshot shows the category-based discovery sections of SnackWise. Users can begin exploring snacks through categories such as sweet, savory, crunchy, fruity, and drinks, while the goal-based section provides another way to discover suitable options. The repeated cards use a consistent visual structure with imagery, labels, spacing, and rounded corners. These reusable card patterns make the interface easy to understand and provide consistency across different sections.

Popular Right Now

The Popular Right Now section displays snack options in a structured card layout. Each snack card presents the food image, snack name, nutrition information, preparation time, dietary tags, and a clear View Recipe action. The information is intentionally organized into small visual groups so users can scan multiple options quickly. Consistent card dimensions and spacing create a balanced grid and strengthen the overall visual language of the website.

Snack Matchmaker

The Snack Matchmaker section provides a guided discovery experience. Instead of requiring users to browse through every available snack, the interface allows them to consider factors such as craving, energy needs, available time, and dietary preference. The controls are grouped into a clear layout so that the user can understand the selection process. This section adds an interactive and personalized element to the website while maintaining the same typography, spacing, colors, and component style used elsewhere.

Quick Snacks

Quick snacks, big flavor

5 min

10 min

15 min

Fruit & Nut Energy Bites
190 cal · 6g protein · 5 min
Vegan · No-bake
[View Recipe](#)

Veggie Hummus Wrap
290 cal · 10g protein · 10 min
Vegetarian · Fiber-rich
[View Recipe](#)

Cinnamon Apple Crunch
170 cal · 4g protein · 5 min
Vegan · Low sugar
[View Recipe](#)

The Quick Snacks section is designed for users who want a snack that can be prepared within a limited amount of time. Time-based filters such as 5 min, 10 min, and 15 min help users narrow their choices. The snack cards continue the same reusable design system used in the Popular Right Now section. This creates consistency while allowing the content to change according to the selected time category.

Recipe of the Moment

RECIPE OF THE MOMENT

Peanut Butter Banana Toast

330 calories · 12g protein · 7 minutes

Ingredients: sourdough toast, peanut butter, banana, chia seeds, a dash of cinnamon.

1. Toast. 2. Spread. 3. Top with banana. 4. Sprinkle and snack.

Carbs 42g • Fat 14g

[Save favorite](#)

Made in Framer

The Recipe of the Moment section gives one snack a stronger visual focus. A large food image attracts attention, while the recipe title and supporting information explain the selected snack. Ingredients,

preparation details, nutrition information, and the Save Favorite action are arranged according to their importance. The section demonstrates content hierarchy by giving the featured recipe stronger emphasis while keeping supporting information organized and readable.

7. Reusable UI Components

Navigation Bar: Provides consistent navigation between the main sections of the website.

CTA Buttons: Used for important actions such as Explore Snacks, Find My Snack, View Recipe, and Save Favorite.

Category Cards: Reusable cards for craving and goal-based categories.

Snack Cards: Reusable cards containing snack image, name, nutrition information, preparation time, tags, and action.

Filter Chips: Compact controls used for time-based filtering.

Matchmaker Controls: Selection controls used to guide users toward a suitable snack.

Recipe Section: Structured layout for presenting a featured recipe and its supporting information.

8. Framer Features Applied in the Design

- Visual page layout and responsive design using Framer's design canvas.
- Reusable components for repeated interface patterns.
- Typography, color, spacing, alignment, and sizing controls for maintaining a consistent visual system.
- Responsive breakpoints for adapting layouts to different screen sizes.
- Interactions and hover effects to provide visual feedback.
- Animations and transitions for a smoother browsing experience.
- Website publishing for presenting the completed SnackWise design as a live website.

9. Design Principles

- Consistency – repeated components maintain the same visual structure.
- Clarity – actions and snack information are easy to identify.
- Visual Hierarchy – typography, imagery, spacing, and size guide the user's attention.
- Simplicity – content is divided into short, understandable sections.
- Reusability – repeated UI patterns are created as reusable components.
- Responsiveness – the layout is designed to adapt to different screen sizes.
- User-Friendly Interaction – controls and actions are presented with clear labels and feedback.

10. Conclusion

SnackWise demonstrates the application of a consistent UI style system to a real consumer-facing healthy snack website. The design combines food imagery, clear information hierarchy, reusable components, responsive layouts, and interactive elements. Framer provides the design and development environment.
